

# Helen's Reef

## Deep South Palau

January 21 - February 1, 2022

Most trips only take you to the well-travelled part of this amazing island nation, but we will explore virgin territory in the deep southern part of Palau - Helen's Reef. We will travel on the majestic Solitude One. The Solitude One is a huge modern live-aboard with spacious rooms, a large dive deck and its own camera room! The dive sites we will explore are spectacular! You can expect pristine reefs, lots of pelagics and plenty of peace and quiet with few other boats in the area. We are timing this for the general time of the bumphead parrotfish mating season so

this could also be a highlight. Bumphead parrotfish are the worlds largest parrotfish and mate in huge conglomerates in this remote area.

Helen's reef is also known for its vibrant reef system where large reef fish flourish amongst the huge population of clams and turtles in this protected marine park. Once again, we take you off the beaten path though we will be aboard the modern and extremely comfortable Solitude One!
