

Remote Paradise

ST. HELENA

February 12-23, 2027

The diving in St Helena is like nothing on earth. Imagine a volcanic rock that rises thousands of metres from the seabed in the middle of the Atlantic Ocean and breaks the surface. This creates a marine environment beyond comparison!

In addition, St Helena is the most remote island in the Atlantic and home to numerous endemic species, millions of birds, beautiful beaches, and incredible topography thanks to its volcanic history. Combined with its history as the exile home of Napoleon, there is plenty for non-divers to enjoy.
